SUMMARY

Front-end web developer who can meet the deadline even in a pressured environment. Good at familiarizing myself in a new environment and in new projects. Will be earning a certificate in Full-stack development from Rutgers University, with developed skills in HTML, JavaScript, CSS, React.js, MySQL, express.js, and Node.js. Experience on a single webpage that helps users to browse financial information including stock markets and currency rates. An eager individual who is excited to challenge myself where I can utilize my skills to the max potential.

TECHNICAL SKILLS

Languages: HTML, CSS, JavaScript, Node.js, jQuery, Sequelize, ORM, MySQL, express, React.js, MongoDB, PWA, NoSQL

PROJECTS

Project Name: Stock Watch

Link to GitHub: <https://github.com/misterjaykay/Project-1>

Link to Deployed Project: <https://misterjaykay.github.io/Project-1/>

- We wanted to create a Web Application where beginning investors can search and compare stock prices in a clear and concise environment. We wanted to enhance the user experience by adding sections for top stocks and a currency exchange table.
- My responsibilities in project was to create the front end page using HTML and CSS framework called Bulma and also help the team with the JavaScript code for Moment.js (for live time) and API calls.
- HTML, CSS including Bulma and Animate.css, JavaScript including Moment.js and JSON, and jQuery.

Project Name: Local Grub

Link to GitHub: <https://github.com/eplatvoet/localgrub>

Link to Deployed Project: <https://localgrub.herokuapp.com/>

- Local Grub is an app that utilizes the Zomato & MapQuest API to gather local restaurant information based off of the user's city choice. This app was created to help promote small business throughout local communities, and give users that chance to explore restaurants besides the big chain/franchises.
- My responsibilities in project was to create back-end side of an app, that acquire user requested data using axios and send it to front-end side using express.js and also storing users saved restaurant data into MySQL database. Also using third-party API, render out the static map with pinned restaurant locations to front-end side.
- JavaScript, Node.js, Express.js, MySQL, jQuery, and JSON.

Project Name: Refresh

Link to GitHub: <https://github.com/hihellos/Refresh>

Link to Deployed Project: <https://home-refresh-app.herokuapp.com/>

- Your home is an investment, and you want to ensure that investment continues to appreciate over time. This requires routine maintenance and updating your home with occasional projects.
- Refresh allows a user to have one place to track all of their home maintenance, from small tasks to large projects, in an easy dashboard.
- In this project, my main two duties were to create the back-end side and user's authentication.
- For user's authentication, I used JSON Web Token to let users authenticate and set the cookies on a local machine, then look for the cookie to authenticate users, if the user does not have a cookie, it will throw it back out to the login page.
- For the back-end, I created models to set schemas and store corresponding datas in MongoDB, and created routes for API calls to create/read/update/delete user's data.
- MongoDB(mongoose), Express.js, React.js, Node.js, JavaScript, JSON API.

EXPERIENCE

4Raffine Inc,

NORTHVALE, NJ
